

Founded in 2005 by a pioneer in the Health Level 7 (HL7®) community, Lantana Consulting Group is a privately held, employee-owned, Certified B Corporation. We help clients define, obtain, and analyze actionable health information to advance interoperability for public health surveillance, quality measurement, and healthcare delivery. We serve the healthcare industry by supporting a variety of customers, including the federal government, payers, providers, and commercial partners.

■ WHY LANTANA?

HEALTHCARE STANDARDS

LEADERSHIP, addressing the core challenges of health information capture, exchange, and analysis. Lantana is recognized industry wide as foundational builders of healthcare standards, beginning with Clinical Document Architecture (CDA®) and continuing through the innovation of Fast Healthcare Interoperability Resources (FHIR®) solutions.

OPEN-SOURCE SOFTWARE

SOLUTIONS, aimed at quality improvement, population health, implementation guide (IG) development, healthcare standards modernization, data quality and verification.

CULTURE OF INNOVATION, working at the forefront of health IT, we develop novel solutions based on individual client needs to ensure client solutions work in the larger health IT ecosystem.

LINK, AN INNOVATIVE HEALTH DATA ACQUISITION AND EVALUATION

PLATFORM, designed to facilitate large-scale health data sharing between electronic health records (EHRs), health information exchange (HIEs), and other entities from public health agencies, researchers, to other data stakeholders. The platform supports both automated source-initiated transmission (push) and automated extraction (pull) data transfer, enabling organizations to establish reliable data pipelines that align with specific measure definitions and reporting requirements. Link accommodates multiple acquisition methods, including FHIR APIs and FTP. It can also handle data formats beyond FHIR. Link's technical flexibility combined with automation capabilities makes it ideal for organizations that need to consistently acquire, evaluate, and deliver high volumes of structured healthcare data that meet precise definitional criteria.

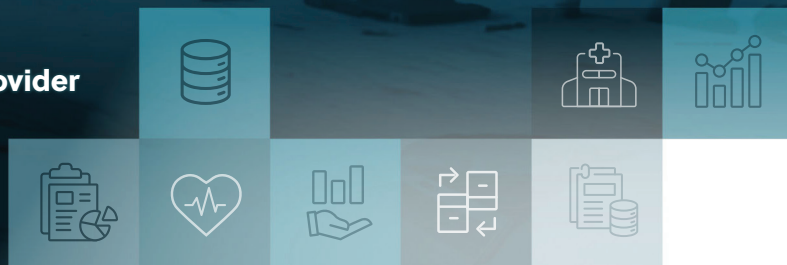

QUALITY MEASURES EXPERTISE,

developing, maintaining, and evaluating electronic clinical quality measures (eCQM) and digital quality measures (dQMs). Lantana contributes to data modernization efforts by leading the industry in development and implementation of dQMs. Lantana transitions legacy measures to FHIR using FHIR Quality Improvement (QI)-Core and Clinical Quality Language (CQL).

PROVEN TRACK RECORD, delivering strategic insights and data-driven solutions that enhance operational efficiency and advance public health priorities. We partner with key government agencies, including CDC, CMS, and NIH, as well as payers, providers, and commercial enterprises to drive meaningful, measurable outcomes.

Lantana specializes in standards used by health information exchanges (HIEs) and electronic health records (EHRs), including HL7® Fast Healthcare Interoperability Resources (FHIR®), Clinical Document Architecture (CDA®) and specifications related to electronic clinical quality measures (eCQM) and digital quality measures (dQM).

Our impact-driven approach transforms healthcare delivery by enabling better patient care, reducing provider burden, and improving public health outcomes through effective data exchange solutions.

CORE SERVICES

- Healthcare Informatics
- Software Development/Engineering
- Quality Measurement
- Program Management
- Data Science, including Data Wrangling, Analysis, Reporting and Education

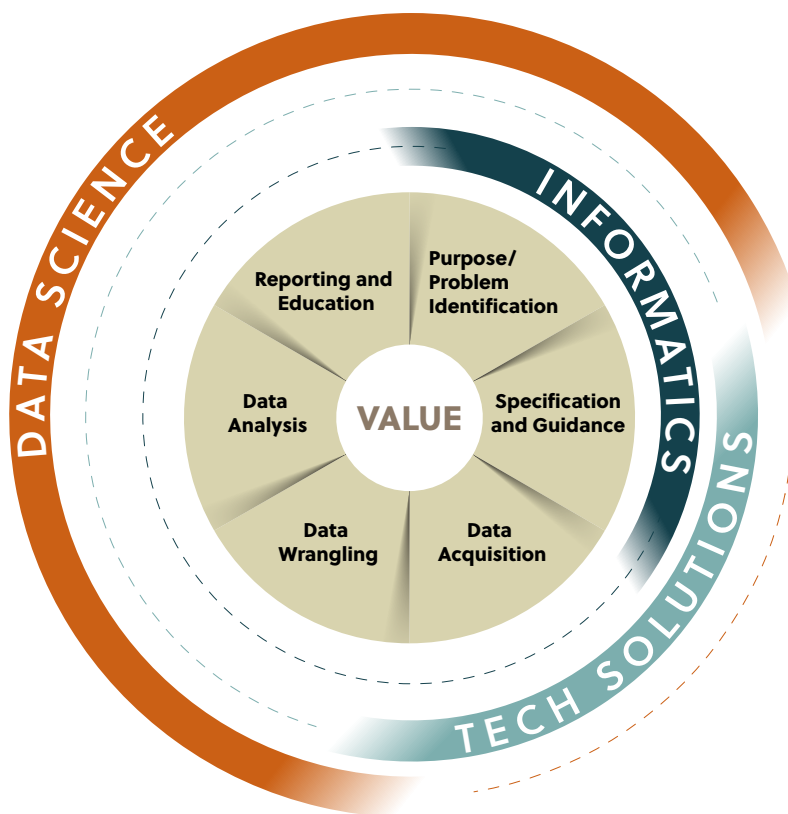

SOFTWARE SOLUTIONS

- Open-source, customizable software
- Link – A health data acquisition and evaluation platform

INDUSTRY EXPERTISE

- Federal programs and policy
- Public health policy
- IG leadership – authors of over 80 HL7 IGs and developers for 29 reference implementations (applications)
- Clinical informatic expertise in nursing, pharmacy, and infection prevention
